RelatedQ: How to get a maximum value out of another table? I have a table t1 with: [ID1] [ID2] [ID3] [ID4] 1 2 3 4 1 3 4 4 And another table t2 with: [ID1] [ID2] [ID3] [ID4] 1 1 1 2 2 3 4 4 I want to write a query that returns: [ID1] [ID2] [ID3] [ID4] 1 1 1 1 2 2 3 4 My idea was to get the maximum values out of the ID column of both tables, multiply them and add ID1, ID2 and ID3,

ID4 together. Unfortunately, that won't work because I cannot use JOIN or MAX in the right query. Is there any way to do this? A: You can use conditional aggregation. The query is like this: SELECT ID1, ID2, ID3, ID4 FROM table1 a INNER JOIN table2 b ON a.id1 = b.id1 AND a.id2 = b.id2 AND a.id3 = b.id3 AND a.id4 = b.id4 GROUP BY a.ID1, a.ID2, a.ID3, a.ID4 HAVING MAX(CASE WHEN a.id = b. 2d92ce491b
